Education

Ph.D. Computational Science and Engineering | Expected Spring 2025 | Advisor: Dr. Vince Calhoun

Georgia Institute of Technology, GA, USA

M.Sc. Computer Science, July 2019

University of New Mexico, NM, USA

Research Interests

Multi-modal Fusion, Reinforcement Learning, Computer Vision, Health AI, Graph Learning, Data Mining, LLM

Experience

Georgia Institute of Technology   *Atlanta, GA*

Graduate Research Associate   *Jun 2019 - present*

I design AI/ML frameworks for learning insights from extensive datasets. I've been studying AI challenges for voluminous, sparse, noisy, and high-dimensional data. My projects include multi-modal fusion, deep Bi-clustering, graph learning, and AI safety. Also, I worked on pattern mining and summarization for time series data. I deployed AI solutions (multi-modal RLHF, LLM + machine-log) to automate clinical services and customer experience. I have experience in online AI model surveillance and fine-tuning.

Selected Projects

Bi-clusformer: a Transformer based end-to-end biclustering framework.
- Leveraged transformer's self-attention across feature and sample dimensions to generate coherent submatrices
- A novel edge embedding enriched with graph semantics. Can capture submodules (biomarkers) of a dynamic graph.
- A cluster-guided attention for learning edge (token) inspired by ViT with computational complexity $O(kn)$

LLM fine-tuning: Semantic search for question answering
- Create a question/answer pipeline that answers users' queries based on given context or input documents
- Leveraged OpenAI APIs Langchain, and ChromaDB for creating the semantic search protocols
- Used open-source sentence-transformer model *"all-MiniLM-L6-v2"* for text embeddings.

mBAM: deep multi-modal fusion with neuromorphic design
- A multi-modal latent space fusion using spatial and modality-wise attention inspired by the 'Bottleneck Attention Module'.
- Introduced a feedback loop from multi-modal neurons to unimodal. Fuse images, electronic health records, and genomics.
- Clinically deployed a large-scale distributed AI framework for initial mental disorder screening with an accuracy of 93%

Statelet: a summarization framework for time series data
- Discovers a set of 'k' most dominant and explanatory motifs from an extensive collection of time series.
- Novel implementation of Earth Mover Distance (EMD) for motifs comparison and Kernel Density Estimator (KDE) for smoothing their frequency subspace.
- Devised a probabilistic framework for selecting the summary shapes with maximum prevalence and diversity.

SpaDE: Semantic locality preserved clustering & segmentation
- Joint optimization of sample-feature distributions using an Auto-encoder architecture for instance-feature co-clustering
- Differentiable heuristic for sparsity & semantic locality to enhance 2D segmentation.
- RLHF fine-tuning with a reward model on neurologists subgrouping preference vs. clustering results from the base model.

Modeling brain connectivity with interpretable graph neural network (GNN)
- Model biological networks by instantiating their components as nodes and interaction/causal inferences as the edges.
- Multi-headed self-attention to learn node embedding and an orthonormal readout for graph-level representation.
- Introspect the trained model by finding concept activation vector (CAV) - orthogonal vectors towards learned features.

IBRNN: Information-theoretic introspection for AI Interpretability
- Explore the theoretical upper/lower bound of information compression in RNN layers.
- CBOW for word2vec embedding of the text corpus and bi-LSTM for the downstream task.

NOKIA BELL LABS   *Murray Hill, NJ*

Data Science Research Intern   *Sep 2021 - Dec 2021*

   Project Title: Routing failure tickets to the corresponding service team
- Built a machine-logs summarizer to compress log files with billions of lines.
- Instantiated a multi-modal LLM-log model to route IT tickets from customer error reports and machine logs.
- The deployed model achieved ∼ 9.7 % improvement over human performance.

University of New Mexico   *Albuquerque, NM*
RESEARCH ASSISTANT   *June 2017 - April 2019*
- Worked on data mining models for multivariate time series - motif detection and a summarization framework.
- Designed exhaustive-search-based solutions for biclustering and tri-clustering algorithms.

University of New Mexico   *Albuquerque, NM*
TEACHING ASSISTANT   *Aug 2016 - May 2017*
- Assisted in CS undergraduate classes on Linear algebra, Declarative Programming, and Computer Algorithms.
- I hold TA Office hours to help students with their assignments, grading, and tutorials on Haskell, Scheme, and GNU Emacs.

International Islamic University of Chittagong (IIUC)   *Bangladesh*
LECTURER   *May 2013 - June 2016*
- Conducted classes for courses - C, C++ Programming Language, Data Structures and Algorithms
- I worked as an Academic Advisor of a sophomore section (25 students) and mentored them for academic success.
- Undergraduate thesis advisor in Spring/Fall 2014, 2015, Spring 2016

Skills

Programming	Python, CUDA, C/C++, Scala, JAVA, C#, JavaScript, Jquery
Cloud Technologies & DB	AWS, Google Cloud, Flask, Hadoop, Spark, GCP, Hive, MySQL, BigQuery, MongoDB, PostgreSQL
Libraries	PyTorch, TensorFlow, OpenCV, Ray, Stanford CoreNLP, Pandas, NLTK, Scikit-Learn, PySpark, Hugging Face
Tools	MATLAB, R, MLOps, FMOps, XGBoost, Docker, DeepSpeed, Slurm, SPM, Git, Heroku

Leadership & Awards

2024	**Next Generation Scholar Award,**	IEEE Engineering in Medicine & Biology Society
2024	**Career Development Award,**	Georgia Institute of Technology
2024	**Conference Travel Fund,**	Conference on Computer Vision and Pattern Recognition (CVPR)
2018	**Program organizing secretary,**	UNM Computer Science Student Conference
2017	**Graduate Education,**	Bangladesh-Sweden Travel Trust Fund for Higher Education
2008-2013	**Dean's List Merit Scholarship,**	Chittagong University of Engineering and Technology
2005-2007	**Educational Board Scholarship,**	The Government of Bangladesh for Academic Excellence
